Philosophy of Science meets Machine Learning

9 – 12 November 2021

Alte Aula (9.-10.11) & Konferenzsaal MPI (11.-12.11) Tübingen

Machine learning (ML) does not only transform businesses and the social sphere, it also fundamentally transforms science and scientific practice. The workshop focuses on that latter issue. It aims to discuss **whether** and **how ML transforms the process of scientific inquiry**. For this, it sets out to analyse the field of ML through the lenses of **philosophy of science, epistemology, ethics** and cognate fields such as **sociology of science**.
